DETAILED ACTION

Election/Restrictions

Applicant's election of Group II in the reply filed on 4/5/10 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 15-19, 21-22, 24-25 are rejected under 35 U.S.C. 102(e) as being anticipated by Galambos et al. (Galambos), U.S. Patent 6,537,437.

Galambos discloses an actuator comprising: a tube with an open end and an inner surface at least partially filled with a liquid containing an electrolyte, the inner surface being electrically chargeable when in contact with the liquid; an electric field generator for generating a field along a lengthwise axis of the tube to induce a pressure in the liquid; an object in fluid communication with the liquid in the tube through the open end such that the pressure in the liquid exerts a force on the object; and wherein the force on the object is able to actuate the object (see col. 3, lines 10-25). The patent discloses the same type of tube, including the materials making up said tube (see col. 3, lines 25-40). The pressure is caused by an electroosmotic flow, which further teaches the use of generating a stronger electric field by the use of further electrodes (see col. 3, lines 40-53).

Therefore, since the Galambos patent discloses each and every limitation, the claims are anticipated.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 28-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Galambos as applied to claims above.

The Galambos patent fails to disclose the object is a piston slideable mounted in the cylinder. The patent teaches that the wall is deformable or movable in response to the pressure (see col. 4, line 17-24).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the disclosure of Galambos patent by the teachings of contained therein.

One having ordinary skill in the art would have been motivated to do this modification, because the modification to the shape of the object would have been within the purview of the ordinary artisan.
